

## Front End Developer

**Location:** Edinburgh  
**Salary:** negotiable depending on experience  
**Type:** Full time, Permanent

Red61, a highly successful live event ticketing software company, is looking for a Front End Developer with experience in multiple web development frameworks to join the team.

Owners of the VIA Ticketing System, we provide software, services and consultancy to festivals and venues around the world. We are the ticketing solution that drives the Edinburgh Festival Fringe (the largest arts festival in the world), as well as the largest arts festivals on four continents with clients across the UK, Australia, South Africa, UAE and Canada.

We use a wide range of innovative and unique technologies that enable our clients to deliver the ultimate customer experience and provide the best solutions for event sales, data capture and distribution.

We are currently looking for a talented Front End Developer with experience in multiple web development frameworks to lead the development of the presentation layer of a greenfield project, crafting a replacement user interface for our industry-leading box office solution.

### **About the Front End Developer role:**

- Helping with the implementation of a high-quality greenfield web application
- Delivering high-quality work in a fast-paced, Agile development environment
- Working closely with the Product team, UX Designer and wider development team on general product delivery, ensuring all products are consistent in design and style
- Working closely with the Technical Director to ensure all development is in alignment with the company's technical strategy
- Client-focused web development work including transactions websites
- In-house web projects and improvements to existing web apps

### **About you:**

- Relevant degree in computer science, web design, or similar, or equivalent work experience
- Experience in multiple modern web frameworks, such as Angular and React
- Experience in interacting with JSON, REST APIs and JWT authentication
- Experience working with a UX designer to build web products from wireframes
- Confidence working across Javascript frameworks

- Strong portfolio of previous work demonstrating your skills
- Ability to write clean, concise and maintainable code
- Great attention to detail

**Desirable:**

- Previous experience developing business-facing web apps and products, tailored to the specific needs of a specific customer
- Experience with source control (we use both SVN & Git)
- Strong working knowledge of visual design and UX
- Experience working with automated testing tools and interfacing with a testing team
- Experience with PHP or working in a LAMP-stack environment

This is a fantastic opportunity to be a key part of the development team, blazing the trail for modern web development technologies and standards, ensuring that your voice is heard and your confidence in advocating the right technology choices shines through.
